

Group 3 — Member Contributions (Part 1 & Part 2)

Falaq Nadeem

Home page, application form layout, GitHub deployment (Part 1); Lead & database integration (Part 2)

In Part 1, Falaq designed and built the home page (index.html), laid out the structure of the application form, and managed the GitHub repository deployment. In Part 2, as team lead, he is converting all pages to PHP, building the shared header/nav/footer includes, consolidating the site's CSS into a single stylesheet, and managing the database connection and the about page's dynamic query.

Muhammad Ali

Jobs page, application form submission, Jira board (Part 1); Jobs & manager dashboard (Part 2)

In Part 1, Muhammad Ali built the jobs listing page and the application form's submission handling, and maintained the team's Jira board. In Part 2, he is converting jobs.php to render all job postings dynamically from MySQL, creating the jobs database table, and building the password-protected HR manager dashboard (manage.php) with filtering, sorting, and status-update features.

Syed

Application form fields and validation (Part 1); Server-side processing (Part 2)

In Part 1, Syed built the application form's fields and its client-side validation. In Part 2, he is removing all client-side validation and rewriting it entirely as server-side validation and sanitisation in process_eoi.php, which also creates the eoi database table and inserts validated applicant records.

Hend

About page (Part 1); Database design & about page front-end (Part 2)

In Part 1, Hend designed and built the About page, including the team profile section. In Part 2, she wrote the CREATE TABLE SQL statements for both the eoi and about database tables, and rebuilt the about page's front-end HTML and CSS structure to display member data dynamically from the database.
